

# Power Down:

## Electrical Safety for Service

The workers who have signed their names below have received basic training on working safely with electric shock and arc flash hazards, and appropriate protective measures. The training was designed to teach mechanical service workers, who will be performing work on HVAC equipment pushing 480 volts or less, how to identify applicable electrical hazards and protect themselves from those hazards. The training is based largely on National Electrical Code NFPA 70E – 2021, Article 130 *Work Involving Electrical Hazards*.
