

20 Years of Safety Excellence – July 2023: Heat Stress

Each year, thousands of workers suffer from heat illness while working in high temperatures, direct sun, and humid conditions; dozens even die. Many mechanical contractors spend part of their working day in hot environments, both indoors and outdoors. Workers performing physical labor are often exposed to hazardous heat conditions that can have severe safety and health outcomes. This month's kit includes information and posters from MCAA, OSHA, CNA and Milwaukee Tool. **We will also be partnering with Tyfoom on a free heat stress webinar on July 27th at 3:00 pm ET.**
