

# Current Threats in Construction and How CNA Can Help

As construction-related claims become more frequent and expensive than ever before, new trends have emerged in the types and causes of losses. CNA offers tailored coverages to help construction companies mitigate these risks, along with resources to help keep projects and workers safe.

## General Liability

### TOP 3 CLAIMS

1 Struck By Object

2 Slip/Trip

3 Construction Defect

### Emerging Causes

Supply chain issues can result in the use of alternate materials, which in turn can result in defects when applied by workers who lack experience and expertise.

More litigation against construction companies with an increased use of subcontractors who may not have the right insurance coverage can lead to additional liability for the insured.

## Auto

### TOP 3 CLAIMS

1 Rear-Ended Incident

2 Failure to Yield

3 Backing

### Emerging Causes

Cell phones and electronics are being used more often while driving, not just for communication but also work tasks and meetings. This merging of work and home life can jeopardize safe driving and lead to more severe claims.

The high cost of repairs, along with a lack of supplies due to parts availability and new technology, can cause delays in vehicle maintenance and increase the chance of mechanical breakdown.

## Workers' Compensation

### TOP 3 CLAIMS

1 Manual Material Handling

2 Struck By

3 Slip/Fall

### Emerging Causes

Distraction, labor shortage, mental and physical fatigue, supply chain, social inflation, co-morbidities, are just a few of the factors impacting workforce resiliency.

Jobs may take longer due to on-site training, social distancing requirements and supply chain disruptions, leading to sequencing and re-sequencing of work. Combined with an increase in work hours and workers who are less willing to be mobile, this puts a strain on everyday tasks, leading to more claims.
